

DEPEND ON YOUR GEAR - NOT THE WEATHERMAN

..... ↙

You probably trust lightweight rain jackets about as far as you can throw them. Too often, they feel like a glorified garbage bag – pretty similar to the disposable plastic ponchos you might find at the dollar store.

More impenetrable wet-weather protection keeps the rain out. But more than likely, it will also keep every ounce of body heat in. Too many rain jackets feel like they are lined with lead.

Dri²Pore_{Gen} redefines what a rain garment should be.

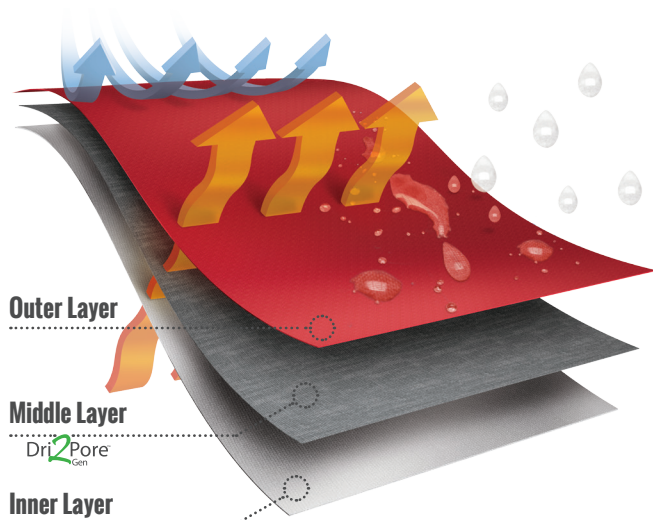

If you're spending your days tracking monster bucks and trophy bass, or conquering the hiking trails, you need a jacket that protects you from the elements without overheating.

Extreme water hold-out. Maximum breathability. Lightweight and packable.

Be prepared for everything, with one garment.

With DriPore Gen 2, the entire range of frogg toggs rain jackets is lighter and stronger than ever.

..... ↘

Pilot Fabric:

- **Outer Layer:** Polyester - durable, breathable, lightweight, abrasion-resistant and supple
- **Middle Layer:** DriPore Gen 2 - extreme water hold-out, maximum breathability, ultra-flexible and lightweight
- **Inner Layer:** Micro-textured tricot fabric - soft, smooth, cool and lightweight. The micro-texture reduces skin contact for a light, cool wearing experience.

Toadz Fabric:

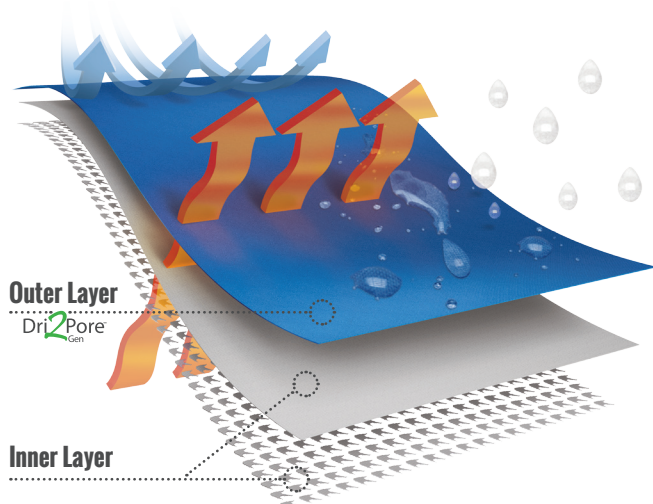

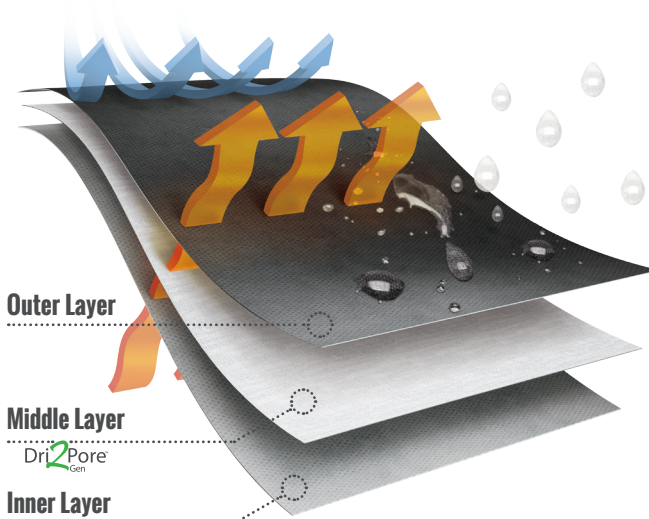

- **Outer Layer:** Polyester - durable, breathable, lightweight, abrasion-resistant and supple
- **Middle Layer:** DriPore Gen 2 - extreme water hold-out, maximum breathability, ultra-flexible and lightweight
- **Inner Layer:** Nonwoven polypro - provides an extra measure of wind resistance and heat retention while still being soft, ultralight and breathable.

Signature Fabric:

- **Outer & Inner Layers:** Frogg toggs' exclusive nonwoven fabric blend - intensified in weight and durability for the tough jobs. Still comfortable and packable, just a little meaner.
- **Middle Layer:** DriPore Gen 2 - waterproof, wind resistant and breathable film that is weight and performance matched to the nonwoven fabric blend to get the job done in any weather

Classic Fabric:

- **Outer & Inner Layers:** Frogg toggs' exclusive nonwoven fabric blend - provides a supple hand feel, durability, flexibility, unmatched wind resistance and breathability, along with all-day comfort
- **Middle Layer:** DriPore Gen 2 waterproof, wind resistant and breathable film that is weight and performance matched to the nonwoven fabric blend for a great wearing experience in any weather.

Java Fabric:

- **Outer Layer:** Polyester - durable, breathable, lightweight, abrasion-resistant and supple
- **Middle Layer:** DriPore Gen 2 - extreme water hold-out, maximum breathability, ultra-flexible and lightweight
- **Interior:** Printed with a nonstick micromesh print to keep skin contact to a minimum and provide a light, airy wearing experience

Ultra-Lite Fabric:

- **Outer Layer** - DriPore Gen 2 film exposed directly to the elements, making this fabric the lightest of all our materials. It trades a fraction of its durability vs. our other fabrics for a bonanza of packability and a windfall of weight reduction. Soft, supple and extremely lightweight
- **Inner layer** - a weight and performance matched blend of exclusive nonwoven fabrics designed to promote air flow and breathability while offering a smooth, soft touch when worn.
