

AMG[®] UH-1[®] GEN II

HOLOGRAPHIC SIGHT

ELEVATOR PITCH:

The new AMG[®] UH-1[®] Gen II picks up where the Gen I left off, now with a dedicated night-vision button providing quick access to 4 NV settings, with immediate recall to your last daylight setting. With the UH-1[®] Gen II, you get an improved sight picture through the enlarged viewing window, making target acquisition even faster, and easy battery changes with the toolless battery cover, plus a lighter load at just 11 ounces.

WHY DID WE MAKE THIS RED DOT?

Our customers have been asking for a night-vision compatible AMG[®] UH-1[®], and we're committed to meeting Vortex Nation[®]'s needs, especially when it comes to military and law enforcement shooters. We took the opportunity when developing the Gen II to update the industrial design, implement a truly toolless battery cover, and provide a larger viewing window.

WHAT IS NEW TO THIS OPTIC?

It's faster, and ready to roll no matter the time of day. We added night-vision compatibility with 4 NV settings and a dedicated NV button, reduced the overall weight, enlarged the viewing window, and added a new, toolless battery cover.

HOW DOES THIS OPTIC STAND UP AGAINST COMPETITIVE MODELS?

This is an extremely competitive product in the holographic sight market! It offers excellent durability, a large viewing window, and a solid quick-release mount, plus our VIP warranty!

WHAT ARE THE TOP USES FOR THIS PRODUCT?

Military and Law Enforcement.

HOW DOES THIS UNIT COMPARE TO THE OTHER VORTEX[®] MODELS?

The AMG[®] UH-1[®] Gen II falls in our red dot line, but is a holographic sight. From the FHQ[™] technology for virtually no forward signature, to the quick-release mount, to the large field of view and the insanely fast EBR-CQB reticle, the AMG[®] UH-1[®] Gen II is in a class all its own.

WHAT ARE THE MAIN DIFFERENCES BETWEEN THIS MODEL AND THE OTHER MODELS?

Compared to other Vortex[®] models: The AMG[®] UH-1[®] Gen II is a holographic sight, features FHQ[™] technology, an EBR-CQB reticle, and integrated quick-disconnect mount.

Compared to UH-1[®] Gen I: Start with night vision compatibility and 4 NV settings with a dedicated NV button. Reduce the overall weight and add in the toolless battery cover and enlarged viewing window, and you get a faster, lighter optic.

WHERE IS THIS UNIT MADE?

United States with UK Reticle.
